## SKYLER RELEASES NEW TICK ANALYTICS SOLUTION FOR TICK DATA CACHING AND ANALYTICS

### *Skyler Unveils its Latest Solution for Tick Data as Part of the Skyler C3 Solution Suite*

CONCORD, CA – September 17, 2007 – Skyler Technology, Inc., an innovator in providing ultra low latency trading solutions, is proud to introduce the Skyler C3 Tick Analytics Solution as the latest addition to its Skyler C3 Solutions Suite. The Solution offers built-in logic to cache and analyze tick data thereby providing significantly faster insights and access to tick data.

The Skyler C3 Tick Analytics Solution receives and captures intraday tick data in a time series fashion. The solution provides built in aggregation capabilities and analytics modules for extremely fast access and analysis of real-time tick data. The solution supports queries and subscriptions as well as time window based analytics and replay on a per venue basis. The solution is optimized for ultimate speed of tick data analytics, lowest possible data aggregation latency, and ease of integration into existing trading infrastructures.

Similar to other Skyler C3 solutions, the Skyler C3 Tick Analytics Solution leverages its powerful low-latency technologies to address customer specific needs in trading. With the Skyler 80-20 solutions approach, 80% of the solution is equipped with standard analytics such as the VWAP calculations, pre-built adapters, and feed handlers. The resulting 20% is open for customization that can include custom tick data indicators and business specific logic. As a result, the 80-20 solutions approach yields lower cost of ownership and drastic cuts in time and cost of integration.

Steve Cooper, CEO of Skyler, touts, “The solution is a perfect complement to the existing C3 product suite. The Skyler C3 Tick Analytics Solution will allow our customers to lower the latency of their algorithmic trading infrastructure while leveraging advanced trading insights and analytics.”

Skyler Technology, Inc. develops ultra low latency trading solutions for faster and smarter trading. The Skyler C3 Solutions source liquidity, analyze tick data, trigger smarter trading decisions, and achieve higher fill rates at better prices. The Skyler C3 Liquidity Discovery, Tick Analytics, Algorithmic Container, and Order Routing Solutions are focused on your specific customer needs and emphasize flexibility, ease of use, and simplicity of integration. They combine powerful, low-latency in-memory data processing technologies including stream processing, caching, and order book aggregation with market specific business logic modules. The combination of these capabilities results in a powerful offering that accelerates your trading infrastructure and opens new avenues for your innovative trading ideas.
