

Skyler C3™ Liquidity Discovery & 29West LBM Integrated Solution

Skyler integrates with 29West LBM to deliver the ultimate in end-to-end low latency market data processing. The integrated solution combines Skyler's feed handling and market data analytics solutions with 29West's LBM reliable multi-cast messaging products.

Benefits

- End-to-end low latency solution: normalization, aggregation, and distribution of liquidity information with ultra low latency
- Scalable fan-out of order books to multiple downstream algorithmic trading engines or order routing applications
- Highly tunable setup to get the most out of the configuration
- Extremely low TCO due to significantly reduced number of servers over alternative solutions
- 29West customers seamlessly integrate low latency aggregated liquidity information
- 29West customers gain scalable low latency distribution of Skyler order books
- Enhanced messaging performance achieved by avoiding duplicate services provided by underlying network

Key Features

- Maintains full depth of all order books in real time
- Aggregates across multiple venues
- Publishes images and updates to client via LBM API
- Aggregation and distribution of liquidity information enhanced by use of minimal message latency and maximized throughput
- Adjustable message batch size tuned to either low latency or high throughput modes
- LBM clients can access the C3 server without modifications to their applications
- Supports client-side failover

Two global innovators and experts in the Financial Services industry, Skyler and 29West, integrate their market leading feed handling and analytics solutions and messaging products to deliver a fast, flexible, reliable, and scalable end-to-end market data solution. Contact us to learn more.
